SUMMARY

Ambitious and adaptable Data Engineer with a positive attitude and a strong Software Engineering background. Recognized for a strong aptitude in system design, specializing in architecting scalable Data Platforms from scratch and managing end-to-end data lifecycles. Expertise in building resilient ELT pipelines, implementing the modern data stack, and applying rigorous software design principles. Proven ability to lead Data Governance initiatives and thrive in fast-paced environments. Passionate about continuous learning, Fintech, Blockchain, and exploring Artificial Intelligence applications.

EDUCATION

University of A Coruña. – La Coruña, Galicia
Computer Science - Bilingual program with English, Computing

September 2021 -
July 2025

Outstanding: Artificial Intelligence, Machine Learning, Natural Language Processing, Deep Learning,
Software Development, Backend, Software Design, Information Retrieval.

Honours: Language Processing and Software Design.

EXPERIENCE

Diverger Thinking, S.L. – Software development; Spain, Galicia
Internship Full Stack Java Developer

February 2025 -
May 2025

Developed highly performant RESTful APIs leveraging Spring Boot, GraphQL, and React, applying strong object-oriented design and hexagonal architecture principles.

Bitpanda - Data engineering; Spain, Barcelona
Associate Data Engineer

January 2026 -
Present

Data Platform Architecture: Leveraged strong system design capabilities to architect and implement a scalable, end-to-end Data Platform from scratch, engineered with an extensible architecture to seamlessly onboard future heterogeneous data sources.

Data Ingestion & Pipelines: Built and maintained resilient, orchestrator-agnostic ELT pipelines using Python and dlt to extract data from APIs and AWS S3 (handling Parquet files sourced from upstream Kafka and DMS integrations). Orchestrated via Apache Airflow with managed infrastructure with Astro.

Data Modeling & Warehousing: Engineered scalable solutions in Snowflake, utilizing dbt for modular transformations and ensuring data integrity across the warehouse.

Infrastructure & Observability: Managed Infrastructure as Code (IaC) deployments and CI/CD pipelines using Terraform, env0, and GitLab. Designed a highly observable system architecture prepared for seamless Datadog integration.

Data Governance & Security: Spearheaded governance initiatives by designing and implementing Role-Based Access Control (RBAC) in Snowflake and managing AWS IAM for secure data access and future Snowflake MCP enablement.

High-Stakes Delivery & Collaboration: Successfully navigated fast-paced, high-stakes environments, managing competing priorities and rapid context switching to deliver critical data deliverables under tight deadlines. Coordinated with the engineering team on PII treatment, data lineage, and downstream dependencies.

PROJECTS

Design and implementation of Hough Transform on GPU – HPC

2025

Final grade project developed in the Pluton cluster from UDC. Hough transform was designed and implemented on GPU using CUDA. Different parallelization techniques and resources from CUDA were used to achieve a maximum speedup of +200x, obtaining a much faster and efficient implementation.

Technologies: C++, CUDA

Crypto market data platform – Data engineering

2026

Architected a scalable ELT platform to ingest and analyze real-time cryptocurrency data. Built robust ingestion pipelines using Python and dlt, orchestrated via Apache Airflow in a Dockerized environment. Engineered a star-schema data warehouse in

Snowflake using dbt for modular transformations, ensuring data integrity through automated testing and CI/CD. Developed an interactive dashboard with Streamlit for financial metrics visualization and managed infrastructure as code via Terraform.
Technologies: Python, Snowflake, dbt, Airflow, Streamlit, Terraform, Docker, SQL, GitHub Actions.

ACTIVITIES

Capture The Flag, CTF– *Took part in a cybersecurity competition*

2024

Exciting team-based cybersecurity competition to solve various cybersecurity challenges, focused on learning.

SKILLS/INTERESTS

Languages: English (Fluent), Spanish (Native), Galician (Native).

Data Engineering: Snowflake, dbt, Apache Airflow, Astro by Astronomer, dlt, Streamlit, ETL/ELT, Data Modeling (Star Schema), Data Lineage. Familiar with: Kafka, AWS DMS. Currently learning: Dagster, Databricks.

Cloud & DevOps: AWS (S3, IAM), Terraform, env0, Docker, GitLab, GitHub Actions, Datadog, Linux.

Software Engineering: Python, Java, C++, SQL, Software Architecture, System Design, RESTful APIs, OOP, Hexagonal Architecture.

Machine Learning & AI: NLP, Computer Vision, LLMs, RAG, Scikit-learn, Pandas, NumPy, OpenCV.

Data Governance: Role-Based Access Control (RBAC), Data Lineage, PII Treatment.

Web & Other Frameworks: JavaScript, React, FastAPI, Spring Boot, GraphQL.

Soft Skills: Adaptable, ambitious, positive attitude, cross-functional collaboration, continuous learning, problem-solving.
